

Eufisky

Private help during a risky phone call.

A voice agent for older adults and their families

Built on AssemblyAI

The risk inside the conversation

\$2.4B

Reported fraud losses in 2024
Adults aged 60 and older

**“Your benefits end today.
Read me the number
on your Medicare card.”**

An illustrative scam call

Source: FTC, Protecting Older Consumers (Dec 2025). All fraud, not only phone scams.

Guardian pauses the caller

76 / 100

Urgency and private data requests raise risk.

Caller on hold.
Margaret gets private help.

Prerecorded Replay scenario in the browser demo

The call flow

Trusted contacts

Ring directly. No transcription or recording.

- | | | |
|-----------|-------------------------|---|
| 01 | Front Door | Ask an unknown caller who they are and why they called. |
| 02 | Live monitoring | Score the caller and senior through separate audio streams. |
| 03 | Private Guardian | Hold the caller and help the senior choose what happens next. |

40: private nudge 65: Guardian hold* 90: recommend family

*Earlier for defined sensitive disclosure or compliance signals.

AssemblyAI throughout the call

AssemblyAI capability	Eufisky use
Voice Agent API	Front Door screening and private Guardian dialogue
Universal Streaming	Separate caller and senior streams with fixed labels
Keyterm prompting	Names, ordinary call purposes and scam vocabulary
Batch PII redaction	Redacted text and audio after microphone calls
LLM Gateway	Incident summary with a deterministic template fallback

Scam-risk decisions come from explicit rules and recorded evidence.

Private help, reversible choices

The senior keeps control

Resume the call
Invite family privately
End the call
Trust the caller

Reports use recorded call events.
Trusted conversations stay private.

Preloaded sample incident report

Voice reliability: checks and limits

89 + 4

Python tests + JavaScript audio checks

Hosted Chrome microphone check

13 seconds of valid capture frames
5.4 seconds of returned voice audio
No browser exceptions

Same recording: “pharmacy delivery” now recognized correctly.

Synthetic English speech. Human accents, noise and scam false positives remain unbenchmarked.

The first buyer: an adult child

\$9–15 / month

Family subscription hypothesis
Pricing and demand need validation

First pilot

Families supporting an older parent

Measure false alarms, recognition
and acceptance of intervention.

Next: real phone lines and caller identity verification

Later distribution: telcos and senior-living operators
